3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **diceify.art** for a **SaaS / free online craft tool (photo-to-dice-art generator)**, **B2C, English, no local footprint** site, generated on October 03, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

65/100

SEO HEALTH SCORE

Critical Issues Found:

1. Terms contradict pricing (Creator Pass 'permanent' vs 30 days; Explorer project limit vs 'unlimited'); Privacy Policy names Vercel Analytics, omits PostHog session replay, Cloudflare, Supabase
2. Organic sessions down ~80% May→Sep 2026 (1,886→343); clicks halved the week of the May 21 2026 Core Update; two exact-match tool competitors (diceartgenerator.io/.com, registered 22–23 Jan 2026, upload box in hero) now hold the desktop 'generator' SERP; desktop position swings 3 ↔ 20–46
3. No visible person/entity: no About page, Article author = Organization, no sameAs/founder/Wikidata; the only third-party description is a competitor rating Diceify 3/5
4. /gallery is 57 words with 0.35% CTR at position 9 and 6.1 s mobile LCP (lazy LCP image, 13 × 150 KB single-size images)
5. 'Built by hand' copy and schema sit on digital renders; no real build photos in main content

Quick Wins:

1. priority on the first four gallery cards (LCP 6.1 s → ~2.5 s)
2. Cache rules in public/_headers (immutable _next/static, 30 d images)
3. Fix Terms §4.1/4.4/5.1 and the Privacy processor list
4. Organization sameAs + founder + a visible 'Diceify is...' sentence; point 'dice art generator' anchors at / not /editor
5. Bing Webmaster verification + Cloudflare Crawler Hints (IndexNow); prefetch={false} on /editor links; drop-trailing-slash (307→301)

2. Audit Categories

2.1 Technical SEO

Score: **72/100**

What Works

- Self-canonical flat URLs
- Real 404s incl. case variants
- www→apex 301
- HTTP/2 + brotli, TTFB 60–160 ms
- nosniff, X-Frame-Options, Referrer-Policy, Permissions-Policy
- Static server-rendered JSON-LD
- Lighthouse SEO 100 on every page
- Valid robots.txt and sitemap; hreflang en + x-default

Findings

No long-lived caching on hashed assets or images **High**

cache-control: public, max-age=0, must-revalidate on /_next/static/* and /images/*; ~50 conditional requests per repeat view

Recommendation: Add cache blocks to public/_headers: _next/static immutable 1 y; images 30 d + stale-while-revalidate

Gallery LCP 6.1 s on mobile **High**

LCP element is a lazy-loaded next/image fill card; no srcset

Recommendation: priority on first row; responsive variants

Homepage canonical slash inconsistency **High**

canonical/og:url/hreflang/sitemap use https://diceify.art; Google canonical is https://diceify.art/

Recommendation: Emit the slash form for the home path in lib/seo.ts and app/sitemap.ts

/account indexable while disallowed Medium

200, index, follow, same title/description as /editor; robots.txt Disallow hides any noindex

Recommendation: Remove Disallow, add noindex metadata and a distinct title

No HSTS, no CSP Medium

Headers absent on all responses

Recommendation: Strict-Transport-Security max-age=31536000; includeSubDomains; CSP as Report-Only first

307 temporary redirects for slash/.html variants Medium

/dice-art/, /gallery/, /index.html, /dice-art.html → 307 via html_handling auto-trailing-slash

Recommendation: wrangler.jsonc html_handling: drop-trailing-slash; re-test /s/*

/blog/why-i-built-diceify never indexed Medium

GSC: Discovered – currently not indexed; 2 internal links, no images, dated 2024

Recommendation: Add links, images, real update; then Request Indexing

/editor is a client-rendered shell Medium

66 words of HTML text ('Loading workspace...'), position 28, same metadata as /account

Recommendation: Static 100–150-word intro + noscript

Minor hygiene Low

Two robots metas on the 404; no security.txt; manifest crossorigin=use-credentials; no IndexNow

Recommendation: Dedupe, add security.txt, enable Cloudflare Crawler Hints

2.2 Content Quality

Score: 54/100

What Works

- /dice-art: answer-first guide, Flesch ~81, correct size math (363 dice/ft² at 16 mm), both glue methods with a real failure story, genuine Last updated

- Two first-hand stories with specifics (founder's COVID build with video; Jeremy's plywood/Liquid Nails build)
- No filler or AI-pattern phrasing; non-templated metadata
- Concrete worked example on the homepage (87×77 · 4,564 black · 2,135 white)

Findings

Terms contradict pricing **High**

§4.4 'permanent access ... for the lifetime of the Service' vs 30-day Creator Pass (plans.ts accessDays 30); §4.1 project limit vs 'unlimited projects'

Recommendation: Rewrite §4.1, §4.4, §5.1; bump Last updated

Privacy Policy out of date **High**

Names Vercel Analytics (unused); omits PostHog session replay, Cloudflare, Supabase; dated Jan 2025

Recommendation: List real processors, replay masking, retention, legal entity

Renders presented as hand-built pieces **High**

'built by hand' on /gallery, /dice-art and ImageGallery schema; images are digital renders; only real build photo is a blog thumbnail

Recommendation: Correct copy; add a Real builds section; label Built / Digital preview

No About page, author bio, founder or sameAs **High**

Founder appears only as a byline; /dice-art author is the Organization

Recommendation: /about page, Person schema, Person as guide author, Organization founder + sameAs

/gallery thin (57 words), CTR 0.35% at position 9.3 **High**

Name-only captions; description promises 'loved ones' not on the page; grid sizes only in filenames

Recommendation: Data captions (grid, dice count, size), intro, sections, new title/description

Blog stale and partly unindexed **High**

2 posts (2023-11, 2024-01), no dates on cards, no body images, founder post not indexed, video without VideoObject

Recommendation: 1–2 first-hand posts/month, dates, media, VideoObject

Unanswered questions AI engines take elsewhere **High**

Weight, bulk cost, framing/hanging, exports (no PDF), templates, comparison are missing

Recommendation: Measured first-party numbers in /dice-art; templates and comparison pages

Factual and byline errors in the Jeremy post **Medium**

'35 × 47 inches' is the dice grid (frame 26×32 in); byline credits Jeremy for a third-person rewrite

Recommendation: Fix the sentence; correct the byline or get a first-person Q&A

Build-time figures disagree across pages **Medium**

'a day or two' vs 'a full day' vs '100+ hours' for ~1,600 dice

Recommendation: One source of truth; publish a measured dice/hour rate

Unsubstantiated and stale claims **Medium**

'Join 5,000+ creators' unsourced; footer © 2025, schema © 2024

Recommendation: Tie to real data or soften; build-time year

2.3 On-Page SEO

Score: **62/100**

What Works

- Unique keyword-led titles ≤60 chars on almost every page
- One H1 per page; question-form H2s on /dice-art
- Breadcrumbs; complete alt text
- Further-reading block on /dice-art

Findings

No nav or footer on 7 of 8 non-home pages **Medium**

Only / has <nav>/<footer>; Privacy, Terms, Contact reachable only from the homepage; posts carry 2 internal links

Recommendation: Footer + compact nav in app/(marketing)/layout.tsx; contextual links in posts

'dice art generator' anchor points at /editor; homepage FAQ duplicates /dice-art Medium

The only exact-match anchor sends the head term to a 66-word app shell; 5 of 6 homepage FAQ questions repeat /dice-art

Recommendation: Generator anchors → /; trim homepage FAQ to product questions

Weak titles/descriptions on the low-CTR pages Medium

/dice-art description is a table of contents; /gallery description 178 chars and truncated; home description 172 chars

Recommendation: 'Dice Art: How to Make It, Dice Count & Size Chart | Diceify'; 'Dice Art Examples: Portraits With Dice Counts | Diceify'; numeric descriptions ≤145 chars

Duplicate metadata /editor vs /account; og:title 'Blog'; posts reuse generic og-card Low

Recommendation: Distinct titles, per-post og:image

2.4 Schema / Structured Data

Score: 72/100

What Works

- 0 validation errors; static server-rendered JSON-LD
- BreadcrumbList correct on 4 pages
- ImageObject license fields complete (Image Metadata rich result detected by GSC)
- /dice-art Article complete; FAQ JSON-LD generated from visible text

Findings

Organization not a first-class entity; no @id graph High

Nested only in WebSite publisher, re-declared inconsistently in Article/WebApplication/ImageGallery

Recommendation: Single @graph with #organization, #website, Person #john; reference by @id

No sameAs High

Instagram, TikTok, Reddit, YouTube exist in the footer but not in schema

Recommendation: Add sameAs, founder, foundingDate, alternateName

Inconsistent/unsupported logo High

favicon-192 on most pages, logo-full.svg in blog Articles (SVG unsupported by Google)

Recommendation: One 512 px PNG everywhere

WebApplication Offer price 0 only; duplicate WebApplication on /editor Medium

Plans are Creator \$19, Studio \$9/mo, \$36/yr; no aggregateRating

Recommendation: Tiered Offer array from PRICING; merge via @id; do not fabricate ratings

Deprecated HowTo; two FAQPages with different answers Medium

FAQ rich results retired May 2026; HowTo deprecated

Recommendation: Remove HowTo; keep one aligned FAQPage on /dice-art

Blog Articles lack image; dateModified = datePublished; Person without url Medium

Recommendation: Add images, real dateModified, Person url /about

2.5 Performance (CWV)

Score: 78/100

What Works

- TTFB 60–160 ms, HTTP/2, brotli, CF cache HIT
- TBT 60–100 ms, CLS ≈ 0 everywhere
- Small CSS, small DOM, fonts preloaded with display swap
- Home and /dice-art lab LCP within or near target

Findings

/gallery LCP 6.1 s mobile (lab) High

LCP image lazy-loaded; load delay 1.6 s + load time 3.4 s competing with ~2 MB of images

Recommendation: priority={index < 4} on GalleryCard + responsive variants

No caching for repeat views **High**

max-age=0 on hashed assets and images; Lighthouse understates it

Recommendation: public/_headers cache rules

Image bytes 1.4–2.0 MB per page **High**

images.unoptimized: true → no srcset; 600×600 files for 174–280 px slots

Recommendation: Build-time 320/480/640 webp variants + custom loader

JS weight and third parties **Medium**

530–660 KB JS, 250–340 KB unused; /editor chunk prefetched on marketing pages; PostHog 119 KB (97 KB optional)

Recommendation: prefetch={false} on /editor links; trim/defer PostHog modules

Text-page LCP render delay; both hero images fetchpriority=high **Medium**

57% of LCP is render delay; 217 KB of hero images compete with CSS/fonts on mobile

Recommendation: High priority on the visible hero image only

2.6 AI Search Readiness

Score: 62/100

What Works

- All 17 AI user agents tested get 200 with identical bytes; robots allows all
- /dice-art opens each section with a quotable number; AI answers already quote it verbatim
- ChatGPT sends referrals (31 sessions / 90 d)
- Brand queries rank #1

Findings

Competitor comparison defines the brand (3/5) and Diceify has no answer page **High**

diceartgenerator.io claims 'no project information', 'limited customization', 'privacy: upload' (false per codebase); true gap: no PDF export

Recommendation: Honest, dated, bylined /best-dice-art-generators with method and feature table; request corrections

Weak entity identity **High**

No sameAs, no Wikidata, no visible 'Diceify is...' sentence, confusion with 'Dicify'

Recommendation: Definitional sentence, schema sameAs/founder, Wikidata item, disambiguation line

No Bing verification artifact, no IndexNow **High**

ChatGPT and Copilot depend on Bing's index; Bing 58 sessions/quarter

Recommendation: BWT import from GSC; Cloudflare Crawler Hints

No owned numbers for weight, cost, dice/hour **Medium**

Dice Art Studio is quoted for dice counts; competitor publishes \$0.01–0.02/die

Recommendation: Measure and publish first-party, dated figures; gallery captions with dice counts

Freshness, authorship, FAQ extractability **Medium**

Organization author; 2 posts; FAQ questions are <button>s so extractors pull zero answers; answers differ from /dice-art

Recommendation: Person author; h3/details FAQ; one source of truth

Agentic: /editor empty without JS; AI policy undeclared; no aria-live for save/build **Medium**

Agentic readiness 60/100 (heuristic; no Lighthouse agentic fraction available)

Recommendation: Static intro; declare policy deliberately; role=status

llms.txt 404; no Markdown delivery, .well-known files or WebMCP **Low**

Optional; Google ignores llms.txt

Recommendation: Add public/llms.txt; defer the rest

2.7 Images

Score: 55/100

What Works

- Alt text complete; decorative images alt=""
- webp everywhere
- Hero images sized with width/height; no image CLS

Findings

No responsive delivery **High**

One 600 px size per image, 140–175 KB each; 1.0–1.9 MB waste per page

Recommendation: Variants + custom loader; fix sizes attributes

Above-fold gallery image lazy-loaded **High**

Recommendation: priority on first row

fill images without width/height on /dice-art and /gallery **Medium**

Safe today (fixed-ratio wrappers), fragile

Recommendation: Keep wrappers or pass width/height

Hidden hero 'reveal' photo fetchpriority=high **Medium**

79 KB competing with LCP resources

Recommendation: lazy / no priority

2.8 Search Experience (SXO)

What Works

- Homepage fits the gift-maker persona (74/100): clear H1, two consistent CTAs, worked example
- /dice-art has the strongest text on the SERP for 'how to make dice art'
- Brand queries convert at 61–78% CTR

Findings

/gallery is the wrong page type for its demand **High**

'dice art' pos 6, 899 impr, 0 clicks = image-block signature; inspiration intent; 57 words and 13 renders

Recommendation: Rebuild as 'Dice art ideas & real builds' with photos, video (VideoObject), data captions, make-one-like-this links

Homepage is a landing page; generator SERPs are 90–100% tools with in-hero upload Medium

0 file inputs on /; EMD competitors registered 2026-01-22/23 have drag-and-drop upload in the hero; desktop pos 3.1 (Apr) → ~21 (Aug/Sep)

Recommendation: In-hero drop zone → editor crop step; one-line 'what is free'

Three URLs compete for the same intents Medium

/, /gallery, /dice-art all surface for 'dice art'; homepage FAQ duplicates 5 of 6 /dice-art questions; / shows instead of the guide for 'how to make dice art'

Recommendation: De-duplicate FAQs; generator anchors → /

/dice-art matches how-to intent but not its format Medium

SERP has 7 videos + 4 Reddit threads; guide's first viewport has no image, CTA, ToC or video

Recommendation: Answer-first intro, ToC, CTA, build video, process photos, named author

Deprioritise mismatched queries Info

dice painting, dice art kit, picture dice, art dice are different intents

Recommendation: No pages; a 'what to buy' block at most

3. Action Plan

Phase 1: Critical Fixes Week 1

- Fix Terms §4.1/4.4/5.1 to match plans.ts
- Rewrite Privacy processors (Supabase, Stripe, GA4, PostHog replay, Cloudflare)
- Replace 'built by hand' with accurate copy; label tiles
- Point 'dice art generator' anchors at /
- priority on first 4 gallery cards
- Cache rules in public/_headers
- GSC: request indexing /privacy /terms; resubmit sitemap

Phase 2: High-Impact Improvements Weeks 2-3

- In-hero upload drop zone on / (hand-off to editor crop) + 'what is free' line
- /about page + Person schema + Person author on /dice-art
- Schema @graph: Organization sameAs/founder/logo PNG, tiered Offers, remove HowTo, one FAQPage
- Visible 'Diceify is...' sentence + Dicify disambiguation
- Bing Webmaster + Cloudflare Crawler Hints + llms.txt
- Gallery rebuild with data captions, real builds, CTA; retitle
- /dice-art ToC, CTA, retitle, underlined links, FAQ markup
- Sitewide nav/footer; blog contextual links
- Responsive image variants + custom loader; single high-priority hero image
- prefetch={false} on /editor links; trim/defer PostHog
- /account noindex, /editor static intro, drop-trailing-slash 301s, HSTS, CSP-RO
- Fix Jeremy post facts/byline; VideoObject; expand founder post; Request Indexing

Phase 3: Content & Authority Month 2

- Measure: weigh dice, dated bulk prices, timed 50×50 build
- /dice-art weight, cost, framing, exports sections; grow to 2,200–2,800 words
- /best-dice-art-generators honest comparison; correction request to competitor
- Spokes: size calculator, buying dice, how to glue, best photos; 50×50 build log
- Homepage FAQ trim, H2 cleanup, pricing H2, real creator count, 'Free' cue
- Wikidata item

- Sitemap lastmod per page; per-post og:image
- Blog cadence 1–2/month

Phase 4: Monitoring & Iteration Ongoing

- Weekly GSC: desktop 'dice art generator' position, CTR of /dice-art and /gallery, indexation of new pages
- Lighthouse /gallery mobile after image fixes (LCP < 2.5 s); curl -I for cache headers and 301s
- Bing Webmaster coverage and Copilot citations; GA4 AI-assistant referrals by landing page
- Compare against the May 21 2026 baseline on the next core update
- Link building: Product Hunt, AlternativeTo, maker subreddits, BoardGameGeek, STEM resources

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO (Google SEO Intelligence Skill), October 03, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
